PrintBar Blanket And Roller Wash

Dosage concentration ratio: 1-3%

Packing: 18 l/barrel

Place of Origin: Shanghai

Features:

- This product has a strong cleaning ink function, non-toxic, odorless, non-flammable, storage security
- No adverse effects and damage to the ink roller and PS plate
- Compared with gasoline, the cleaning time and cleaning effect are the same, and the consumption cost is lower than gasoline! And safer!

Concentration use methods and precautions:

1. Put proper amount of blanket and roller wash in a small plastic bottle and drill a hole with a diameter of 0.5 mm on the bottle cap.
2. Check whether the scraper is intact and sharp. If there is any damage, it should be replaced.
3. Check whether the ink roller is horizontal, and replace the old one (otherwise the amount of cleaning agent will increase in the cleaning process)

4. Check whether the cylinder , PS plate, ink roll is completely separated, separate cleaning to wash quickly and clean.
5. Before starting the machine, the blanket and roller wash will be sprayed on the ink bucket and cylinder, will be washed after the ink roller to scrub the ink bucket and cylinder .Start the machine (to the highest speed) and spray an appropriate amount of blanket and roller wash on the ink roller, spray back and forth 2-3 times,The interval time between each spray is 15-20 seconds (a little longer for large machines).Run for 1-2 minutes then tighten the ink scraping (this should be paid special attention to).
6. After tightening the ink scraping, the connection between the ink roller and the ink scraping roller is good, and all the ink on the roller is scraped clean for about 1 minute.If the roller is not clean, should continue to add an appropriate amount of blanket and roller wash in the roller where is not clean, until clean.
7. The roller is cleaned. After rinsing on the roller, the ink will scrape out milky liquid and continue to rinse until the scraper is clean. Then the machine can stop.The entire cleaning process takes 4-5 minutes.
